Scheme Specific Risk Factors

(i) Risks associated with investing in Bonds/Fixed Income Securities

Investment in Debt is subject to price, credit, reinvestment, liquidity risk and interest rate risk. The NAV of the Schemes may be affected, inter alia, by changes in the market conditions,

interest rates, trading volumes, settlement periods and transfer procedures. Investing in Bonds and Fixed Income securities are subject to the risk of an Issuer's inability to meet principal and interest payments obligation (credit risk) and may also be subject to price volatility due to such factors as interest rate sensitivity, market perception of the creditworthiness of the issuer and general market liquidity (market risk).

The timing of transactions in debt obligations, which will often depend on the timing of the Purchases and Redemptions in the Schemes, may result in capital appreciation or depreciation because the value of debt obligations generally varies inversely with the prevailing interest rates.

Interest Rate Risk: As with all debt securities, changes in interest rates will affect the Scheme's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of longer-term securities generally fluctuate more in response to interest rate changes than do shorter-term securities. Interest rate movements in the Indian debt markets can be volatile leading to the possibility of large price movements up or down in debt and money market securities and thereby to possibly large movements in the NAV. **Liquidity or Marketability Risk:** This refers to the ease at which a security can be sold at or near its true value. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is characteristic of the Indian fixed income market.

Credit Risk: Credit risk or default risk refers to the risk which may arise due to default on the part of the issuer of the fixed income security (i.e. will be unable to make timely principal and interest payments on the security). Because of this risk debentures are sold at a yield spread above those offered on Treasury securities, which are sovereign obligations and generally considered to be free of credit risk. Normally, the value of a fixed income security will fluctuate depending upon the actual changes in the perceived level of credit risk as well as the actual event of default.

Reinvestment Risk: This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme or from maturities in the Schemes are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk refers to the fall in the rate for reinvestment of interim cashflows.

Liquidity Risk: Securities, which are not quoted on the stock exchanges, are inherently illiquid in nature and carry a larger amount of liquidity risk, in comparison to securities that are listed on the exchanges or offer other exit options to the investor, including a put option. The AMC may choose to invest in unlisted securities that offer attractive yields. This may increase the risk of the portfolio.

Prepayment Risk: The risk associated with the early unscheduled return of principal on a fixed-income security. The early unscheduled return of principal may result in reinvestment risk.

(ii) Risks associated with investing in Equity and Equity related instruments (applicable in case of L&T Monthly Income Plan and L&T MIP - Wealth Builder Fund):

- Monthly Income is not assured and is subject to the availability of distributable surplus.
- Equity securities and equity related securities are volatile and prone to price fluctuations on a daily basis. The liquidity of investments made in the Scheme may be restricted by trading volumes and settlement periods. Settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases, due to settlement problems, could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme's portfolio would result at times, in potential losses to the Schemes, should there be a subsequent decline in the value of securities held in the Scheme's portfolio.

- The performance and the value of the Scheme's investments may be affected by factors affecting the securities markets such as price and volume volatility in the capital markets, currency exchange rates, changes in law / policies of the Government, taxation laws and political, economic or other developments which may have an adverse bearing on individual securities, a specific sector or all sectors. Consequently, the NAV of the Units may be affected.
- The liquidity and valuation of the Scheme's investments due to its holdings of unlisted securities may be affected if they have to be sold prior to their target date of divestment.
- The Scheme may invest in securities which are not quoted on a stock exchange ("unlisted securities") which in general are subject to greater price fluctuations, less liquidity and greater risk than those which are traded in the open market. Unlisted securities may lack a liquid secondary market and there can be no assurance that the Schemes will realize its investments in unlisted securities at a fair value.

(iii) Additional Scheme Specific Risk Factors (applicable in case of L&T MIP – Wealth Builder Fund)

- Monthly income is not assured and is subject to availability of distributable surplus
- Since the NAV of the Scheme will be linked to the share price performance of Companies where the Scheme will invest, they may outperform or under perform the benchmark index (CRISIL MIP Blended Fund Index) and/or the constituents of the said benchmark index.
- Since the Scheme proposes to invest upto 30% in equity and equity related instruments, risk associated with it could be relatively more than a pure Income/ Debt Scheme. Investors are requested to consult their legal, financial, tax advisor before investing.

(iv) Risk associated with investing in Derivatives

The AMC, on behalf of the Schemes may use various derivative products, from time to time, in an attempt to protect the value of the portfolio and enhance Unitholders' interest. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments

As and when the Scheme(s) trades in the derivatives market there are risk factors and issues concerning the use of derivatives that Investors should understand. Derivative products are specialized instruments that require investment techniques and risk analyses different from those associated with stocks. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is the possibility that a loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the "counter party") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mis-pricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.

Please read the Scheme Information Document for Strategies relating to Trading in Derivatives.

(v) Risk Associated with Investing in Securitized Debt and PTC:

Schemes may invest in domestic securitized debt such as Asset Backed Securities (ABS) or Mortgage Backed Securities (MBS). ABS are securitized debts where the underlying assets are receivables arising from automobile loans, personal loans, loans against consumer durables, etc. MBS are securitized debts where the underlying assets are receivables arising from loans backed by mortgage of residential/ commercial properties. ABS/ MBS instruments reflect the undivided interest in the underlying pool of assets and do not represent the obligation of the issuer of ABS/ MBS or the originator of the underlying receivables. The ABS/ MBS holders have a limited recourse to the extent of credit enhancement provided. If the delinquencies and credit losses in the underlying pool exceed the credit enhancement provided, ABS/ MBS holders will suffer credit losses. ABS/ MBS are also normally exposed to a higher level of reinvestment risk as compared to the normal corporate or sovereign debt.

Typically, investments in securitized debt carry credit risk (where credit losses in the underlying pool exceed credit enhancement provided, (if any) and the reinvestment risk (which is higher as compared to the normal corporate or sovereign debt).

Generally the following asset classes for securitization are available in India:

- Commercial Vehicles
- Auto and Two wheeler pools
- Mortgage pools (residential housing loans)
- Personal Loan, credit card and other retail loans
- Corporate loans/receivables
- Single Loan PTC

In terms of specific risks attached to securitization, each asset class would have different underlying risks, however, residential mortgages are supposed to be having lower default rates as an asset class. On the other hand, repossession and subsequent recovery of commercial vehicles and other auto assets is fairly easier and better compared to mortgages. Some of the asset classes such as personal loans, credit card receivables, etc., being unsecured credits in nature, may witness higher default rates. As regards corporate loans/receivables, depending upon the nature of the underlying security for the loan or the nature of the receivable the risks would correspondingly fluctuate. However, the credit enhancement stipulated by rating agencies for such asset class pools is typically much higher and hence their overall risks are comparable to other AAA rated asset classes. The rating agencies have an elaborate system of stipulating margins, over collateralization and guarantee to bring risk limits in line with the other AA rated securities.

A single loan PTC is a securitization transaction in which a loan given by an originator (Bank/ NBFC/ FI etc.) to a single entity (obligor) is converted into pass through certificates and sold to investors. The transaction involves the assignment of the loan and the underlying receivables by the originator to a trust, which funds the purchase by issuing PTCs to investors at the discounted value of the receivables. The PTCs are rated by a rating agency, which is based on the financial strength of the obligor alone, as the PTCs have no recourse to the originator.

The advantage of a single loan PTC is that the rating represents the credit risk of a single entity (the obligor) and is hence easy to understand and track over the tenure of the PTC. The primary risk is that of all securitized instruments, which are not traded as often in the secondary market and hence carry an illiquidity risk. The structure involves an assignment of the loan by the originator to the trustee who then has no interest in monitoring the credit quality of the originator. The originator that is most often a bank is in the best position to monitor the credit quality of the originator. The investor then has to rely on an external rating agency to monitor the PTC. Since the AMC relies on the documentation provided by the originator, there is a risk to the extent of the underlying documentation between the seller and underlying borrower.

Investors are requested to note the following additional risks associated with investments in securitized debt and PTC:

- **Tenor risk:** While building the planned amortization schedule for a PTC there can be a clause stating a minimum percentage of receivable by the issue to stick to the initial cash flows. If the receivables are less than the minimum stated receivables then the tenor of the PTC can get elongated or vice versa.
- **Credit risk:** The PTC holders/ Contributors are taking a direct exposure to the repayment ability of the underlying borrowers. Hence the timely payment on the PTCs/ Contributions will depend on the credit quality of the pool borrowers. The credit-cum-liquidity enhancement stipulated for the PTCs/ Contributions adequately covers the credit risk.
- **Commingling risk:** This risk arises on account of time lag between pool collections and investor payouts, during which the Collection Agent continues to hold the pool collections. The risk of loss of cash flows on account of commingling depends on the credit standing of the issuer.
- **Prepayment risk:** Since the PTCs/ Contributions are structured at "par", prepayment of loans in the pool will not lead to any loss. The prepaid principal will be passed on in its entirety to the PTC holders. However, prepayments result in higher reinvestment risk to the PTC holders/ Contributors than originally envisaged. This risk is borne by the PTC holders/ Contributors.

Investors are requested to refer section on "Guidelines for investments in Securitized Debt", mentioned in this Document.

- (vi) **Risk associated with investing in Overseas/ Foreign Securities:** The Schemes currently do not propose to invest in overseas/ foreign securities. However, subsequently after obtaining necessary approvals/ consents, to the extent that some part of the assets of the Schemes may be invested in securities denominated in foreign currencies, the Indian Rupee equivalent of the net assets, distributions and income may be adversely affected by the changes in the value of certain foreign currencies relative to the Indian Rupee. The repatriation of capital also may be hampered by changes in regulations concerning exchange controls or political circumstances as well as the application to it of other restrictions on investment. Since the Schemes would invest only partially in overseas securities, there may not be readily available and widely accepted benchmarks to measure performance of the Scheme. To manage risks associated with foreign currency, the Fund may use derivatives for efficient portfolio management including hedging (and for such other matter as may be permitted by RBI/ SEBI from time to time) and in accordance with conditions as may be stipulated by SEBI / RBI from time to time. Investors are requested to note that the investment in overseas/ foreign securities (subject to obtaining necessary approvals) shall be as permitted by RBI and/ or SEBI.

- (vii) **Risk associated with Short Selling and Securities Lending:** A mutual fund may lend and borrow securities in accordance with the framework relating to short selling and securities lending and borrowing specified by the Board. The risk associated with upward movement in market price of security sold short may result in loss. The losses on short position may be unlimited as there is no upper limit on rise in price of a security. Subject to the Regulations and the applicable guidelines, the Scheme and the Plans thereunder may, if the Trustee permits, engage in stock lending. Stock lending means the lending of stock to another person or entity for a fixed period of time, at a negotiated compensation. The securities lent will be returned by the borrower on expiry of the stipulated period. It may be noted that Securities Lending activity would have the inherent probability of collateral value drastically falling in times of strong downward market trends or due to it being comprised of tainted / forged securities, resulting in inadequate value of collateral until such time as that diminution in value is replenished by additional security. It is also possible that the borrowing party and / or the approved intermediary may suddenly suffer severe business setback and become unable to honour its commitments. This alongwith a simultaneous fall in value of collateral would render potential loss to the Schemes. Besides, there can also be temporary illiquidity of the securities that are lent out and the Schemes may not be able to sell such lent out securities. The risks in lending portfolio securities, as with other extensions of credit, consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lender of securities i.e. the Schemes and the approved intermediary. Such failure to comply can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary.

(viii) Other Scheme Specific Risk factors

- Returns:** Investors of the Schemes of L&T Mutual Fund are not being offered any guaranteed returns.
- Dividends:** The Schemes does not guarantee or assure any monthly or quarterly or semi-annual dividend. The dividend distributions in each Dividend Options of the Schemes/ Plans will be dependent on the returns achieved through active management of the portfolio(s). Monthly / Quarterly / Semi annual distributions of the Schemes may vary from month to month or quarter to quarter or semi annual to semi annual based on the investment results of the portfolio(s). Investors should note that pursuant to the payment of dividend, the NAV of the Dividend Options of the Schemes will fall to the extent of payout and statutory levy, if any. Under dividend option, in case of net dividend entitlement is less than Rs. 250/- the dividend amount will be reinvested in the Schemes automatically.
- Performance Risk:** Scheme's performance can decrease or increase, depending on a variety of factors, which may affect the values and income generated by a Scheme's portfolio of securities. The returns of a Scheme's investments are based on the current yields of the securities, which may be affected generally by factors affecting capital markets such as price and volume, volatility in the stock markets, interest rates, currency exchange rates, foreign investment, changes in government and Reserve Bank of India policy, taxation, political, economic or other developments and closure of the stock exchanges. Investors should understand that the investment pattern indicated for the Schemes, inline with prevailing market conditions, is only a hypothetical example as all investments involve risk and there can be no assurance that the Scheme's investment

objective will be attained nor will the Schemes be in a position to maintain the model percentage of investment pattern / composition particularly under exceptional circumstances so that the interest of the unitholders are protected. The AMC will endeavor to invest in highly researched growth companies, however the growth associated with equities is generally high as also the erosion in the value of the investments/portfolio in the case of the capital markets passing through a bearish phase is a distinct possibility. A change in the prevailing rates of interest is likely to affect the value of the Scheme's investments and thus the value of the Scheme's Units. The value of money market instruments held by the Schemes generally will vary inversely with the changes in prevailing interest rates.

4. **Basis Risk (Interest Rate Movement):** During the life of floating rate security or a swap the underlying benchmark index may become less active and may not capture the actual movement in the interest rates or at times the benchmark may cease to exist. These types of events may result in loss of value in the portfolio.
5. **Liquidity & Settlement Risk:** Investors may note that AMC's investment decisions may not be always profitable. The Scheme shall invest substantially in Debt, Money Market Instruments & Government Securities and accordingly, trading volumes, settlement periods and transfer procedures may restrict the liquidity of these investments. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. By the same rationale, the inability to sell securities held in the Scheme's portfolio due to the absence of a well developed and liquid secondary market would result, at times, in potential losses to the Scheme, in case of a subsequent decline in the value of securities held in the Scheme's portfolio.
6. **Exchange Rate Risk:** Companies with high export earnings may generate revenues and make investments in foreign currencies. Changes in exchange rates may have a positive or negative impact on the prospects of such companies.
7. **Changes in Government Regulations:** The businesses in which companies operate are exposed to a range of government regulations, related to tax benefits, liberalization, provision of infrastructure and the like. Changes in such regulations may affect the prospects of companies.
8. **Political Risk:** Whereas the Indian market was formerly restrictive, a process of deregulation has been taking place over recent years. This process has involved the removal of trade barriers and other protectionist measures, which could adversely affect the value of investments. It is possible that future changes in the Indian political situation, including political, social, or economic instability, diplomatic developments and changes in laws or regulations could have an effect on the value of investments. Expropriation, confiscatory taxation, or other relevant developments could also affect the value of investment
9. **Market Risk:** Securities are subject to price volatility due to factors and forces affecting the stock market, changes in interest rates and market liquidity.
10. **Interest rate Risk:** As interest rates increase or decline, the prices of individual debt securities will increase or decrease thus affecting the NAV. Interest rate movements in the Indian debt markets can be volatile leading to large price movements and hence large movements in NAV.
11. **Duration Risk:** Duration is a risk measure used to measure the bond / security price changes to potential changes in interest rates. Duration of portfolio x the expected changes in rates = the expected value change in the portfolio. Duration is more scientific measure of risk compared to average maturity of the portfolio. The higher the duration of the portfolio, the greater the changes in value (i.e. higher risk) to movement in interest rates. Modified duration is the duration of a bond / security given its current yield to maturity, put / call feature, and an expected level of future interest rates.

- (ii) Additionally, sub-section 8 of section 94 of the Act provides that in case of units purchased within a period of 3 months prior to the record date (for entitlement of bonus) and sold/transferred (including redeemed) within 9 months after such date, the loss, if any, arising on transfer of original units shall be ignored for the purpose of computing the income chargeable to tax if all or any of the bonus units are continued to be held by the unitholder. The loss so ignored shall be treated as cost of acquisition of such bonus units.

E) Tax deducted at source:

Income in respect of units:

As per the proviso to Section 196A(1) of the Act, no tax shall be deducted at source from any income credited or paid to non-resident unitholders in respect of units of a mutual fund specified under Section 10(23D) of the Act.

The capital loss resulting from sale of units would be available for set off against other capital gains made by the investor. However, losses on transfer of long-term capital assets would be allowed to be set-off only against gains from transfer of other long-term capital assets. Losses arising on transfer of short-term capital assets would be allowed to be set-off against any capital gains, whether short-term or long-term. Further, as the long-term gains arising on transfer of units of equity oriented funds are not subject to tax, the long-term capital losses from such units would not be allowed to be set off or carry forward. Unabsorbed capital losses of a particular year can be carried forward

to subsequent years upto a maximum of 8 years provided the return of income is filed within the prescribed time limit.

However, TC in respect of investments through SIP shall be deducted only if the total commitment (i.e. amount per SIP installment x No. of installments) amounts to Rs. 10,000/- or more. In such cases the TC would be recovered in maximum 4 installments.

TC shall not be deducted in respect of:
